Natural Gas Pipeline Pictures

Presented by Maya K. van Rossum, the Delaware Riverkeeper to the Committee on Energy and Commerce

July 9, 2013
Delaware Riverkeeper Network Documents Pipeline Construction Activity in the Delaware River Basin
Contaminated Well Due to Pipeline Construction
Pipelines nearby homes can impact well water like in this case that occurred in New Jersey during pipeline construction. June 2013.
Pipeline Cut Through Public Lands

This pipeline path currently under construction passes through High Point State Park in New Jersey. Often public lands had intact and healthy habitat and mature forests before pipeline cuts occur. June, 2013.
Conversion of Forested Landscapes to ROW

Pipelines often cut through forests and steep slopes which require much technical oversight to ensure measures are used to limit impacts. This pipeline cut through Pike County, PA across the Sawkill Creek. June 2011.
Sediment Discharged to Wetlands

Compost filter socks are topped by sediment-laden water causing large discharge of sediment to the adjacent high quality wetland outside the pipeline ROW.
Pipeline ROWs Are Wide and Cut Through All Land Uses

Overwhelmed and Failing Erosion & Sedimentation Controls

This once forested slope dominated by underground springs and wetlands is a challenging location for a pipeline path with continual issues with stabilization of soils and control of water.
Lagging Recovery

Nine months after this new pipeline began carrying gas, land surface impacts adjacent a high quality tributary to the Delaware River including soil compaction and lack of vegetation growth keep this site in temporary restoration phase. August, 2012
Soil Compaction on ROW

A soil compaction study commissioned by Delaware Riverkeeper Network along a pipeline in Pike County, PA indicated extreme soil compaction along the pipeline ROW in temporary workspace areas which leads to increased stormwater runoff, challenging regrowth conditions, and a likely permanent change to the soil profile.
Waterbody Crossings Are Challenging

Wetlands, streams, and spring crossings are sensitive areas that are challenging places to site pipelines. June, 2013
